

DESCRIPTION Methylprednisolone is a synthetic corticosteroid drug with anti-inflammatory properties. It can be used in the treatment of arthritis, severe allergies, asthma and some types of cancer. Methylprednisolone can alter gene expression and inhibit the production of proinflammatory cytokines through a mechanism where it binds specific nuclear receptors. It can also decrease the number of circulating lymphocytes and stimulate apoptosis.

IMMUNOGEN Methylprednisolone-BTG

HOST ANIMAL Sheep

FORMAT Ig Fraction

Ig CONCENTRATION 5.11 mg/ml (U.V. abs @280 nm)

WORKING DILUTIONS 0.3125 µg/ml (EIA)

PH 7.2

BUFFER 20 mM Phosphate, 150 mM Sodium Chloride

PRESERVATIVE 0.09% Sodium Azide

STORAGE -20 °C

For informational use only.
